SUMMARY

I am a 4th-year Computer Engineering student driven to understand how systems work under the hood. Rather than relying solely on existing frameworks, I prefer building core engines myself. Whether architecting a distributed Java database from scratch, training machine learning models to auto-scale cloud infrastructure, or designing full-stack applications, I focus on writing resilient, scalable code. I am a builder who thrives on complex backend and system design challenges.

EDUCATION

Savitribai Phule Pune University

Bachelor of Engineering (B.E.) in Computer Engineering (4th Year)

2023 – 2027

CGPA: 8.27 / 10

Honours Specialization in Cyber Security

2025 – 2027

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL, C/C++, JavaScript, HTML/CSS
- **Frameworks & Libraries:** React, Node.js, Express.js, FastAPI, Spring Boot, Prisma ORM, Scikit-Learn, Tailwind CSS
- **Databases & Storage:** ConcurrentHashMap, SQLite, PostgreSQL, MongoDB, MySQL
- **Developer Tools:** Git, GitHub, Docker, VS Code, Postman, Jupyter Notebooks, Render

EXPERIENCE

EduSkills Foundation

Remote

Virtual Intern (AI/ML)

Jan 2026 – Mar 2026 | [Certificate](#)

- Built and trained predictive machine learning models using Python, Pandas, and Scikit-Learn to analyze complex datasets.
- Cleaned messy raw data and engineered new features to significantly improve the accuracy and reliability of the models.
- Gained hands-on experience in data preprocessing, model evaluation, and deploying analytics pipelines through simulations.

PROJECTS

ShardDB — Java, TCP Sockets, Concurrency, File I/O

[View Project](#)

- Built a distributed, multi-threaded key-value database from scratch in Java to seamlessly handle concurrent client connections.
- Engineered a custom Write-Ahead Log (WAL) so the database can survive server crashes and instantly reconstruct its memory.
- Programmed a master routing node that mathematically balances traffic and dynamically splits data across backend servers.

Duely — React, Node.js, SQLite, Prisma ORM, Tailwind CSS

[View Project](#)

- Engineered a full-stack web platform that helps users securely manage personal documents, deadlines, and expiry dates.
- Designed a strict relational database schema using Prisma ORM to guarantee data integrity alongside secure authentication.
- Built a warm, minimalist user interface with Tailwind CSS and deployed the live production build directly to Render.

Nodex — Python, FastAPI, React, Random Forest Regressor

[View Project](#)

- Architected an auto-scaling cloud engine using a Python FastAPI backend and an interactive React dashboard.
- Trained a Random Forest Regressor to predict server overloads before they happen by analyzing live RAM usage patterns.
- Built a diagnostic tool where users can simulate heavy traffic spikes and watch the AI automatically scale resources in real-time.

ACHIEVEMENTS

AWS Certified Cloud Practitioner

[Certificate](#)

Validated foundational enterprise cloud computing skills, including AWS core services and deployment architecture.

Cybersecurity Virtual Forage (Deloitte)

[Certificate](#)

Investigated simulated cyber breaches by analyzing forensic data logs to pinpoint root causes and mitigate risks.

Hackathon Finalist (IIIT Delhi)

[Certificate](#)

Ranked in Top 10 of 2,500+ teams by co-developing technical architecture for high-concurrency simulation platforms.

Student Researcher (SPPU)

Presented a technical seminar and research paper on "Smart Pricing Prediction" using machine learning (92% accuracy).
